(250i & 250i dry mill) Coritec 450i manual (1.5 TK bar) Coritec 450i manual (2 TK bar)  
CORiTEC 450i MANUAL – TABLE OF CONTENTS . AES (1.6.6): The CORiTEC 450i is a five-axis CNC milling machine manufactured by imes-icore GmbH. The machine is equipped with a 550-watt motor and a six-cylinder milling unit. The material is machined at the maximum spindle speed of 5,000 rpm. The five-axis milling machine was introduced in the spring of 2010 as an alternative to the traditional machining solutions for CNC machining. By means of the five-axis mode, the machine enables milling with larger tools, and the result is a very fast process with less workpiece and tool breakages. In addition, five-axis milling is also a solution for round and long tools. The five-axis milling machine is a new solution in the world of CNC milling machines and can be compared to the FANUC LAWS series, but the differences are significant. The five-axis milling machine is a

---

fully automatic machine. The tools are automatically loaded and automatically changed and also. After the milling job has been completed, the milling tools are automatically removed by the machine. It is a versatile machine and the workpiece and tool paths are defined by CAD/CAM. The milling process can be executed in both direct and reverse directions, and it is also possible to set the x-, y-, z-, and t-axis movement directions. The machine can be equipped with two and three guide bars. The guide bars are mechanically coupled to the spindle via single-lever plungers. The 5-axis CORiTEC milling machine provides five built-in tool memories. In addition, the machine has a standardised interface for connecting different tool changers (without the adapter). Therefore, the various adapters and tool holders used in other machining centers can be used on the 5-axis CORiTEC machine. The Coritec 450i five-axis milling machine is made of cast steel and it is delivered with a complete tool change station. The machine is equipped with a reservoir for the cutting and the coolant.
