I want to make a list with a list of the same length. import math a = [math.sqrt(math.pow(2,i)) for i in range(3)] a = [a[i],a[i],a[i]] but it returns an error. A: Use zip and lists: a = [math.sqrt(math.pow(2,i)) for i in range(3)] a = [a[i],a[i],a[i]] b = list(zip(*a)) print(b) Output: [(2.0, 2.0, 2.0), (4.0, 4.0, 4.0), (8.0, 8.0, 8.0)] Stability analysis of the blue-green alga Pseudochlorohetea variochlora against chlorinated pesticides. The effect of various chlorinated pesticides and a pesticide/herbicide (chlorothalonil and tebuconazole) combination on the growth and photosynthetic activity of the blue-green alga Pseudochlorohetea variochlora was examined. The effects of the pesticides and their combination on P. variochlora were examined using a 1-l container system. After 10 days of exposure to pesticides, the photosynthetic activities of the alga were severely affected, as the alga was unable to consume the amount of oxygen provided to it. Analyses of the chlorophyll concentration and the photosynthetic activity indicated that P. variochlora was more sensitive to chlorothalonil and chlorothalonil/tebuconazole than to other pesticides. All the pesticides at 0.13 ppm, except permethrin, and the combination of chlorothalonil and tebuconazole at 0.03 and 0.13 ppm resulted in a significant decrease in the chlorophyll concentration and photosynthetic activity. The toxicity of permethrin to P. variochlora was also significantly increased when the alga was exposed to permethrin at 0.13 ppm for 4 days
