How do I set up Easy NIC Test: FastSend? 1.Open your network card in your Windows computer. 2.If it is not already running, press the Start button on your computer. 3.Choose Easy NIC Test: FastSend and press the OK button. 4.Select the MAC address for the testing and click the Open button. 5.

## What's New In Easy NIC Test: FastSend?

You can use FastSend to quickly test the performance of your network card. If you're running low on time, you can quickly test your network card's performance, even if it's not broken. This little application requires no special skills to use. All you have to do is choose the packet length, customize the MAC address and press the 'Send' button. With this simple application, you can quickly check how your network card performs when you need it the most. You can also create a small file that contains a few packet sizes, so that you can easily check the performance of your network card. You can even customize the MAC address of the packet. If you have another network interface card installed, you can easily connect to it. The Windows XP version will display the amount of data that was sent and received. You can also set the window size and color of the graph. Easy NIC Test: FastSend is a lightweight and easy to use application that you can use to test your network interface card. All you have to do is choose the packet length, customize the MAC address and press the 'Send' button. Easy NIC Test: FastSend Description: You can use FastSend to quickly test the performance of your network card. If you're running low on time, you can quickly test your network card's performance, even if it's not broken. This little application requires no special skills to use. All you have to do is choose the packet length, customize the MAC address and press the 'Send' button. With this simple application, you can quickly check how your network card performs when you need it the most. You can also create a small file that contains a few packet sizes, so that you can easily check the performance of your network card. You can even customize the MAC address of the packet. If you have another network interface card installed, you can easily connect to it. The Windows XP version will display the amount of data that was sent and received. You can also set the window size and color of the graph. So now I can use Network card with virtual machine? John 13 Apr 2004, 03:49 AM If you have another network interface card installed, you can easily connect to it. The Windows XP version will display the amount of data that was sent and received. You can also set the window size and color of the graph. Will FastSend detect other NICs in the machine? Steve 13 Apr 2004, 10:35 PM Hi John, you are right - the app does not detect the other NICs, but if you run it on one of your NICS then the other NIC will display its traffic. I also noticed there is a 'test' button which runs the app, so if you are using it in a VM, you can also do a test. Steve
