Take Screen Shot Of a Website to Image Box (visitlog, picture album, inbox, flayout).updated 12:12 pm EDT, Mon May 13, 2007 Fujitsu Games Fujitsu PC Systems and Games has released a new edition of the PC Gamer's Dream Machine Simulator, the game that first let gamers build their own personal computers. The new version has new models for Intel's P4, P3 and PII processors, as well as AMD and PowerPC models. However, price tags remain the same. The simulator works the same as past versions: entering the parts, including the motherboard and processor, and then customizing from there. The only real difference is an option to emulate machine memory and DVD read-only features. In addition, users have the option to add extra details, including processor type, chip type, and motherboard connections. The Dream Machine Creator is available to Windows users for \$39.99, and is available now from the Fujitsu web site.1. Field of the Invention This invention relates generally to a method and apparatus for data transfer through and/or the monitoring of a multidrop network, and more particularly to a multidrop network having a tree network architecture for data transfer through and/or the monitoring of data transfer on the network. 2. Description of the Related Art It is not uncommon for communications networks to be subject to failure. This is especially true in modem wide area networks in which a plurality of independent networks are interconnected in what is referred to as a multidrop network topology. More specifically, in order for a packet to travel through such a network, it must be transferred between each of the multidrop networks and it is possible that the transfer route may be via more than one network. The instant application is directed to a method and apparatus for transferring data through a multidrop network where failure of the network will not interfere with the transfer. The instant invention also relates to the monitoring of data transfer on the network. One problem with conventional data transfer through a multidrop network occurs when a network failure occurs as the network is carrying data. If the network is carrying data from a transmitting network to

System Requirements For PageShot:
