Paracetamol has been suggested as an alternative to opioid analgesics in emergency department. The aim of this study was to determine the association of the dose and plasma concentration of intravenous paracetamol with prognosis of patients with cancer. This retrospective cohort study was conducted at the Emergency Department of Hospitals - Portuguesa State Hospital, Brasilia, Brazil. Patients admitted from January 2004 to December 2012 with gastric cancer were included. The primary outcome was 30 day mortality. Secondary outcomes were 90 day mortality and length of stay. In total, 387 patients were included in the study. The crude 30 day mortality was 25.8% (116/387) and 90 day mortality was 39.1% (152/387). Thirty day mortality was associated with age ($p = 0.045$), ASA score ($p = 0.017$), presence of myocardial dysfunction ($p = 0.037$) and amount of morphine used ($p = 0.019$). In the multivariable analysis, age ($p = 0.042$) and ASA score ($p = 0.020$) remained as predictors of 30 day mortality. In 90 day mortality, predictors were: age ($p = 0.014$), length of stay ($p = 0.014$), use of piperacillin/tazobactam ($p = 0.004$) and mechanical ventilation ($p = 0.030$). No associations were found between the paracetamol dose and either 30 day or 90 day mortality. In the present study, the paracetamol

Description Foxmail is a product created by Fox-IT that claims to provide the privacy and simplicity of standard e-mail applications with the speed and reliability of modern web mail clients. The program has grown substantially, and today is one of the most advanced and stable e-mail clients, and one of the most popular Windows users. The main advantage of Foxmail is that it does not use a browser like other e-mail applications and can deliver messages to the hard disk of the computer, making it more secure. Foxmail uses the standard POP/IMAP protocol and not the proprietary SMTP/POP3 protocol that some other e-mail programs use. Typically e-mail clients are the same system files and applications that are used to download and install the operating system, and they can be quite heavy. Since Foxmail is a single application, it is much lighter and has a faster startup time, so it can be considered a perfect alternative for Windows XP users. Foxmail also has an uninstaller to remove it from your hard disk. Features In addition to all the features offered by other e-mail programs, it also includes: The ability to manage individual folders or to create shared folders with other users. A built-in browser that supports images and can convert e-mail attachments into HTML format. The ability to insert and delete new e-mail messages. Spam control to send messages to a category, so that all the spam messages are directed to a single folder. The option to work with all accounts simultaneously, or to manage and read each account separately. The system maintains several accounts and backups in case of system errors. Foxmail offers three different windows to view and manage your e-mail account: Messages list: here you can view the list of all received e-mails, or only the e-mails you have not yet read. Account list: this window shows all available accounts and allows you to delete messages and folders or create new ones. Drafts: this window shows all the drafts stored in the program. The user can manage the various windows that appear when you click on the main window. Foxmail offers two panels to manage the e-mail account with ease. Tools On the left of the main window, you have the search panel where you can search for a single word, d0c515b9f4

The Zombie Room Studios offers audio production services to record, mix, master and mix final versions of the finished songs. We are a team of experts, sound engineers, that offer services that start from 8 to 10 hours and make sessions to more than 4 hours, which are optimized based on your budget. Hello, we, Team Zombie Room Studios, decided to create something for the community. A simple app that automates your task to record your own song. It will record your song from scratch, and mix it automatically at the end of the recording. The app is designed to offer the best quality to the user, it will not lower the quality of the final song. You will receive a link after the recording is complete, you will use this to make the final mix. This app is capable of recording all types of media players (MP3, FLAC, WMA, WAV, MP4, AAC, OGG etc.) For special features, you can visit the website: Install the app, start the recording and follow the instructions.
